

Dear Colleagues,

Last year, the Digital Forensics Investigation Research Laboratory in University College Dublin developed a 3D computer game for training cybercrime investigators called Virtual Crime Scene Simulator (VCSS) (<http://digitalfire.ucd.ie/?p=1378>). VCSS could make a very nice application for training first responders in cybercrime investigations.

The group are interested in engaging with consortia that are targeting ICT24: Gaming and Gamification. If you are aware of any consortia that would benefit from an additional partner with a readily available demonstrator and expertise in cybercrime training please connect them to Pavel Gladyshev (pavel.gladyshev@ucd.ie), Head of Digital Forensics Investigation Research Laboratory at University College Dublin.

Regards,
Steve
