

New Generation of Components and Systems: ICT-01-2016, ICT-02-2016, ICT-03- New generation of components and systems: ICT-01-2016, ICT-02-2016, ICT-03-2016, ICT-04-2017.

We are interested in the calls related to the topic: "Smart Cyber-Physical Systems", in relation to the development of new typologies of wearable HMIs Human Machine Interfaces.

Specifically we are interested in integrating novel sensing technologies based on the developing of a completely new generation of "smart" materials that can sense touch and respond with acoustic, luminescent and several other types of output. Our major skills and competencies are in design and prototyping advanced specific wearable interfaces.

Please, watch this video for an example: <https://www.youtube.com/watch?v=hhdcwgrrwdg> We are not interested in leading or coordinating any type of action, since we are a company and we don't have the management structure for this, we are anyway available and supportive to help in any phase of proposal - if interested. **Enrico cozzoni** ([enrico.cozzoni@gradozero.eu](mailto:enrico.cozzoni@gradozero.eu))
